EXPERIENCE

Microsoft [Redmond, WA, USA]

Jun 2022 - Present

Senior Software Engineer (Realtime Fraud Protection @ Microsoft Commercial)

Sep 2025 - Present

- Owned the end-to-end transition of a production web application onto our team's Azure infrastructure against a fixed deadline, provisioning environments across stages and completing the traffic cutover without customer-facing downtime.
- Delivered enterprise verification workflows in React and TypeScript, replacing hardcoded UI states with backend-driven rendering and settling API contracts with backend engineers and product managers up front to avoid downstream rework.
- Removed duplicated build and test setup across frontend applications by extending shared standards to pnpm workspaces, Vite, and shared Vitest configurations.
- Strengthened what tests verify by replacing assertions about mocked internals with user-input and visible-validation checks, backed by real React providers, reusable fixtures, and MSW handlers.
- Unified the checks engineers and AI agents run before review, adding code coverage on changed lines to catch untested code alongside lint, test, build, and dead-code checks in shared CI/CD pipelines and local Git hooks via Lefthook.
- Mentored teammates into independent code and PR ownership with question-led reviews and reference implementations; shared engineering and AI practices team-wide via a recurring newsletter and workshops.
- Standardized frontend deployments on Azure Kubernetes Service (AKS) with shared Helm charts, rollout configuration, and Bicep modules for alerting and availability monitoring, giving releases a repeatable and compliant path to production.

Software Engineer II (D365 Fraud Protection @ Microsoft Security)

Jun 2022 - Aug 2025

- Partnered with design, product, and engineering to ship enterprise admin experiences (access controls, reporting) for a large-scale fraud protection platform, improving usability, compliance, and customer trust.
- Modernized legacy Angular and React applications by refactoring components for predictable rendering and maintainable state, expanding automated tests, and applying data-driven performance improvements using real-world telemetry.
- Created and scaled a shared ESLint configuration to standardize frontend code quality across repositories (React, Vite, Vitest, Playwright, Angular), enabling consistent best practices at scale.

Clairvoyant AI, Inc [Chandler, AZ, USA]

Jan 2019 - May 2022

Senior Front End Engineer (Shutterfly.com)

Mar 2020 - May 2022

- Set technical direction for Shutterfly's order processing management portal and guided 7 frontend developers through architecture, delivery, and onboarding.
- Built an interactive Next.js documentation site for client onboarding and provisioned AWS production, QA, and development infrastructure with Terraform.

Front End Engineer (Mastercard Payment Services)

Apr 2019 - Mar 2020

- Delivered WCAG 2.1 Level AA React fintech experiences and refactored React Native applications around shared Microsoft Identity Platform authentication.

Front End Engineering Intern

Jan 2019 - Apr 2019

- Built and shipped a single-page application (SPA) with React and Redux that generates a typographic scale.

EDUCATION

Arizona State University [Tempe, AZ, USA]

Jan 2016 - Dec 2018

Bachelor of Science in Computer Science

- Awarded the Inspiring Global Citizens Award for my dedication to cross-cultural awareness and engagement.

SKILLS

Frontend: TypeScript, JavaScript, React, Angular, Next.js, HTML, CSS

Testing: Playwright, React Testing Library, Vitest, MSW

Build & Cloud: Vite, pnpm, Azure, Kubernetes, Helm, Bicep, Terraform

PROJECTS

[Is programming for you?](#) | YouTube

Dec 2021

- Produced an educational documentary about the world of programming as part of Computer Science Education Week.
